

9 July 2026

Dear Vinod,

I write this letter in my personal capacity as Head of Information Technology Operations & Security to commend you for your exceptional diligence and dedication in driving substantial improvements to the Banks Finacle environment. Your commitment to enhancing operational efficiency and application reliability has been nothing short of remarkable, and the positive impact of your work is noted and appreciated.

I would like to take this opportunity to highlight the improvements you have made. Your optimisation of End of Day (EOD) processes has resulted in a dramatic reduction of completion time from seven hours daily to just one hour. This achievement alone has significantly increased the availability of critical banking systems and has freed up valuable resources for other operational activities.

Furthermore, your optimisation of time-based payment jobs has seen execution times drop from 30 minutes to 1.5 hours down to a rapid 5 to 10 minutes. This change has greatly improved the efficiency of payment processing and has contributed to an enhanced customer experience.

The purging of historical payment data from the history tables has led to marked improvements in all payment-related activities. This has streamlined transaction handling and ensured smoother operation of payment systems across the board.

Your efforts to resolve NPP payment timing out issues through further enhancements in payment transaction handling have been particularly appreciated. These changes have delivered reliable and timely payment processing, which is crucial for our members' and the Bank.

Additionally, the resolution of card messages timing out through improvements in card transaction handling has effectively reduced the number of PCTR unmatched transactions. This has made our card services more dependable and secure for all users.

The refinements you have made to the hybrid payroll upload process have also resulted in notable performance improvements. This has streamlined payroll operations and allowed for faster, more reliable uploads.

With time-based payment jobs and End of Day processes now routinely completing within an hour, the overall availability of the Finacle application has seen a significant boost. This includes improved performance and reliability for both CORE and Channel applications, benefiting staff and members' alike.

Thank you for your unwavering commitment and hard work. Your achievements exemplify the highest standards of professionalism and technical expertise, and you have set a benchmark for operational excellence within the Infosys team.

Congratulations once again on these outstanding contributions. We look forward to your continued success and ongoing improvements to our Banking environment which further improve our members' experience.

Sincerely,

Rizwan Dean
